

Boost Employee Productivity From Anywhere

CollaborationRoom.ai provides a new way to engage and develop teams in a remote work environment. Using our patent-pending solution, supervisors and instructors can manage their teams as if they were together in the same office.

INCREASE ENGAGEMENT

Using artificial intelligence, we measure emotions & facial expressions. If an employee is exhibiting signs of being overwhelmed or frustrated, their manager will be alerted to step in.

INCREASE PRODUCTIVITY

Our technology lets supervisors view employees at their remote workstations and monitor their screens in real time.

INCREASE COMPLIANCE

Stop malicious behavior and keep customer information safe. Our software detects other individuals and cell phones in the employee's work environment.

Hear From One Of Our Partners

LMM is a third-party collection agency operating nationwide and headquartered in Richardson, Texas. Since our establishment in 2004, we have been determined to reinvent the public perception of the collection industry—by building honest relationships with both the clients and consumers we serve.

We were looking for a product that would enable us to increase productivity and enable our employees to continue working from home. Using Collaborationroom.ai, we were able to see instant increase in productivity—and the product delivers a positive ROI in within the first 30 days.

— **John Hickman, Founder of Lockhart, Morris & Montgomery, Inc. (LMM)**
